

Installing software on a university-issued Mac: Self Service

Introduction	1
Installing software	1

Introduction

Self Service is an application installed on all university-issued Mac computers. This application allows the Mac to keep up-to-date with current system requirements, as well as install and update software. This guide will show how to open and install software via this Self Service application.

Installing software

 Select the Self Service application either from your dock, or by opening Finder and searching for "Self Service". Dock view: Finder view:

- 2. Log in with your SCSU email address and password if prompted.
- 3. Scroll to explore available software.

4. Select "Install" under the desired software.

- 5. The program will install and be removed from this list when complete.
- 6. Check back periodically to see what new items are available!
