

## Content Editor

The overall look and feel of the content editor has been modernized.

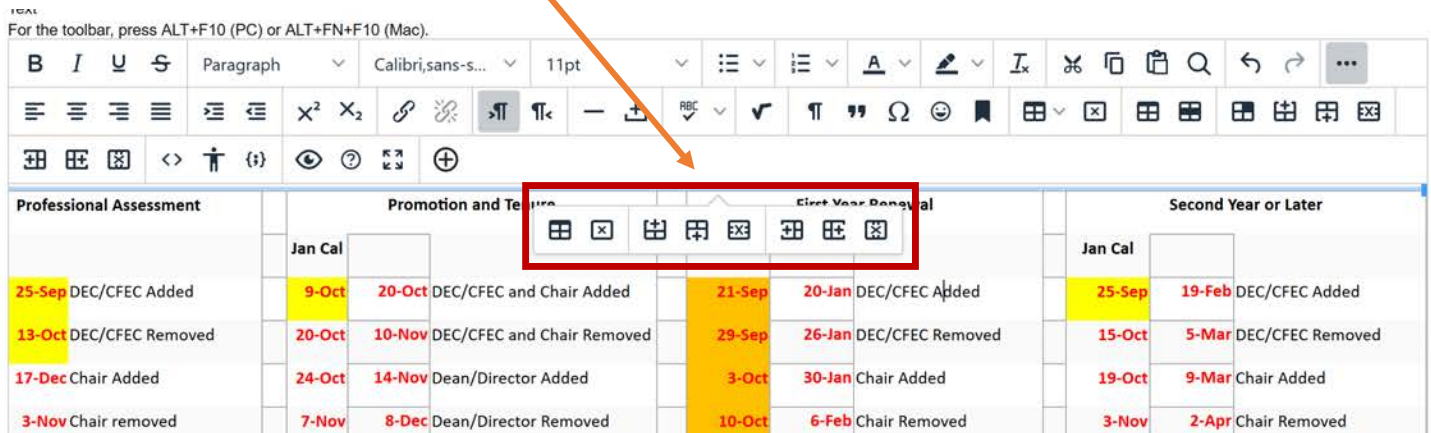

The first two rows essentially stay the same with only slight enhancements to existing functions.

The third row has been revamped.

**Tables** – Manipulating tables is even easier as you can do so directly in the text editor. Clicking anywhere inside a table will immediately show a sub-menu of editing tools:

**Source code** – replaces the “html” icon previously seen and all html code now appears in color for ease of identification.

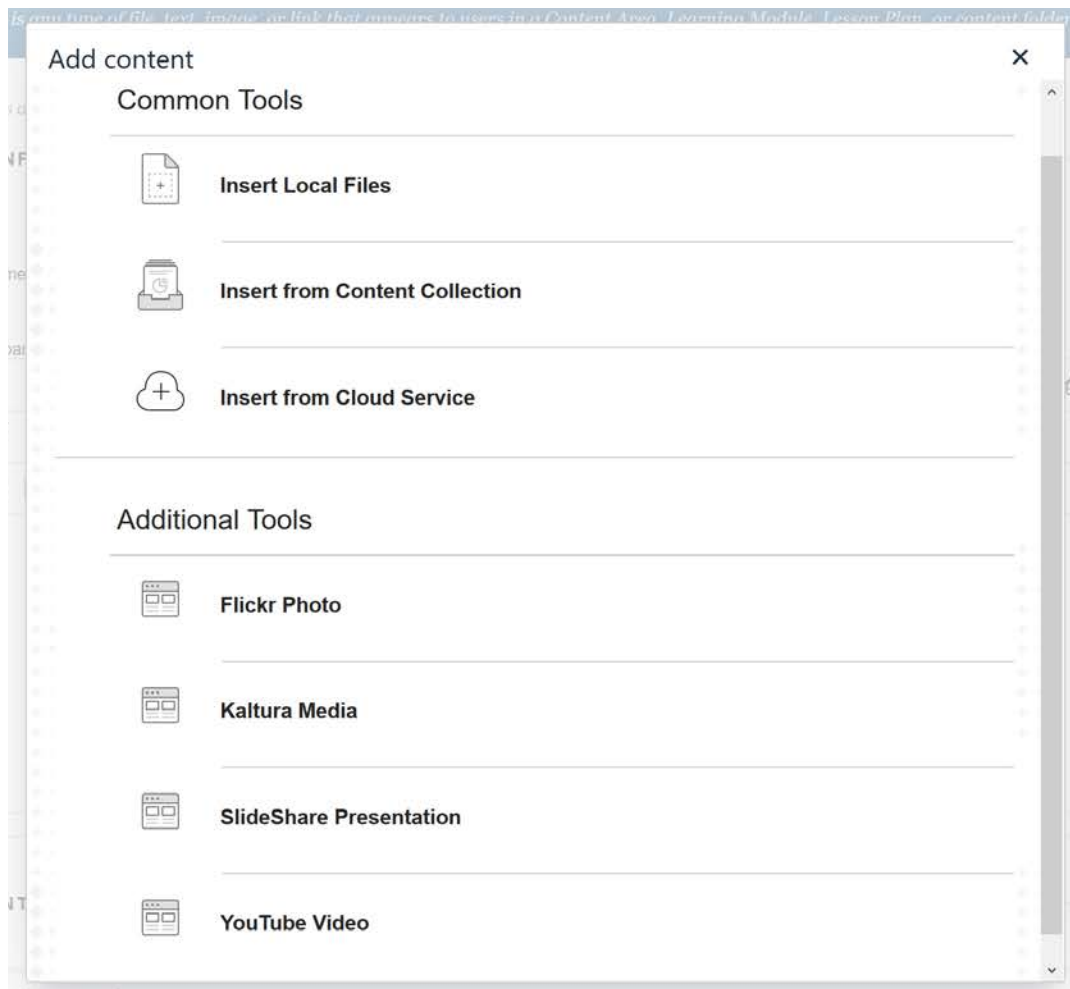

**Accessibility checker** has a more prominent location.

**Preview** – You can now see the text before you submit allowing for adjustments without having to go back and edit.

**Add content** replaces **Add Mashup** – A pop-up menu appears after clicking the plus with the additional options for adding content to the editor. All content placed (including videos) will be embedded automatically.

**Copying and pasting-** When you copy and paste from any third-party software, Learn 9 will prompt you to retain or remove formatting.
